Education

University of Mumbai

Aug 2023 – Present

B.Tech in Artificial Intelligence and Machine Learning

- GPA: 8.53/10.0
- Coursework: Machine Learning, Computer Networks, Operating Systems, Cloud Computing, Distributed Systems

Technical Skills

Languages: Python, Go, Bash, JavaScript

Cloud & DevOps: Kubernetes, OpenShift, Docker, Terraform, Jenkins, Argo CD, GitHub Actions, AWS CodeBuild

Observability & Security: Prometheus, Zscaler (ZIA, ZPA, ZCC), CVE, NVD, EPSS, CVSS

AI & MLOps: MCP, Kubeflow, KServe, AI Agents

Platforms: AWS, Linux, OpenShift, Git, Salesforce

Databases: MySQL, MongoDB

Experience

Zycus

Jun 2026 – Present

Engineering Intern

- Built a production-ready **Zscaler MCP Server** unifying 3 modules (ZIA, ZPA, ZCC) into a single interface, used daily by security leads and 100+ engineers across the global delivery team when resolving access issues.
- Developed an AI-powered **vulnerability scanner** correlating 4 data sources (CVE, NVD, EPSS, CVSS) to assess software risk – adopted as the standard tool by 1000+ engineers across Zycus.
- Automated **OpenShift VM provisioning** using Salesforce, Python, and Golden PVC templates, replacing a manual, ticket-based workflow – once approved, VMs now provision in OCP within seconds, tracked end-to-end through Jira.
- Built and deployed enterprise automation using **AWS CodeBuild and ArgoCD**, contributing to AI-powered developer productivity tools.

KubeEdge

Jun 2025 – Sep 2025

LFX Mentee (The Linux Foundation)

- Contributed to **KubeEdge documentation** by updating version-specific installation guides and troubleshooting resources.
- Built an **ARM64 simulation architecture** to validate CloudCore/EdgeCore deployments and debug edge-cloud communication and performance, removing the need for physical RK3588 hardware during early-stage testing.

Hashnode

Mar 2025 – Present

Technical Writer

- Published technical blog posts and tutorials on **Kubernetes, Docker, Go, AWS, KubeEdge, and K3s**, translating hands-on infrastructure work into practical, reproducible guides.

Speaking & Recognition

- **Speaker at KubeCon + CloudNativeCon India 2026** – Presented a [talk](#), “Validating RK3588 for KubeEdge: Scalable ARM64 Edge Node Simulation Without Hardware”.
- Volunteered at the **Kubeflow booth** at KubeCon + CloudNativeCon India 2026, engaging with the MLOps community and gaining hands-on exposure to real-world ML workflows.
- **Speaker at CNCF Thane** – Delivered a session on WebAssembly in Cloud Native Ecosystems: portability, performance, and secure edge computing.
- Reported a valid **local path traversal vulnerability** in AWS SAM CLI, acknowledged by AWS Security under their bug bounty program.

Projects

ModelForge: End-to-End MLOps Platform with Kubeflow

[github](#)

- Built an end-to-end **MLOps platform** on Kubernetes using Kubeflow, enabling automated model training, experimentation, deployment, and inference.
- Integrated Kubeflow Pipelines, Katib, and model serving to streamline the machine learning lifecycle with reproducible workflows.
- Tools: Kubeflow, Kubernetes, Docker, Python, ML Pipelines

KubeJournal: Kubernetes Cluster Log Collection

[github](#)

- Developed a Go-based Kubernetes log collection utility to retrieve and centralize **node-level logs** across clusters for easier troubleshooting.
- Leveraged **DaemonSets** to collect logs from every Kubernetes node, simplifying observability and debugging in dis-

tributed environments.

- Tools: Go, Kubernetes, DaemonSets, Linux

GitOps CI/CD Pipeline with Jenkins & ArgoCD

[github](#) 

- Designed a **GitOps CI/CD pipeline** integrating Jenkins and ArgoCD for automated Kubernetes deployments.
- Implemented 4 pipeline stages – SonarQube analysis, Docker image builds, auto-sync, and rollback – to improve deployment reliability.
- Tools: Jenkins, ArgoCD, Docker, SonarQube, Kubernetes

Certifications & Training

KubeCon + CloudNativeCon India 2026 Speaker
