Education

University of Mumbai

Aug 2023 – Present

B.Tech in Artificial Intelligence and Machine Learning

- GPA: 8.53/10.0
- Coursework: Machine Learning, Computer Networks, Operating Systems, Cloud Computing, Distributed Systems

Technical Skills

Languages: Python, Go, Bash, JavaScript

Cloud & DevOps: Kubernetes, OpenShift, Docker, Terraform, Jenkins, Argo CD, GitHub Actions, AWS CodeBuild

Observability & Security: Prometheus, Zscaler (ZIA, ZPA, ZCC), CVE, NVD, EPSS, CVSS

AI & MLOps: MCP, Kubeflow, KServe, AI Agents

Platforms: AWS, Linux, OpenShift, Git, Salesforce

Databases: MySQL, MongoDB

Experience

Zycus

Jun 2026 – Present

Engineering Intern

- Architected a production-ready **Zscaler MCP Server** unifying 3 modules (ZIA, ZPA, ZCC) into a single interface, used daily by security leads and 100+ engineers across the global delivery team when resolving access issues.
- Engineered an AI-powered **vulnerability scanner** correlating 4 data sources (CVE, NVD, EPSS, CVSS) to assess software risk – adopted as the standard tool by 1000+ engineers across Zycus.
- Automated **OpenShift VM provisioning** using Salesforce, Python, and Golden PVC templates, replacing a manual, ticket-based workflow – once approved, VMs now provision in OCP within seconds, tracked end-to-end through Jira.
- Engineered CI/CD automation with **AWS CodeBuild and ArgoCD**, powering enterprise-wide AI-driven developer productivity initiatives.

KubeEdge

Jun 2025 – Sep 2025

LFX Mentee (The Linux Foundation)

- Selected as 1 of **150 LFX Mentees** worldwide from a global pool of 27,000+ applicants.
- Authored and merged version-specific **KubeEdge installation guides** and troubleshooting resources into the project's official documentation, used by its global user base.
- Architected an **ARM64 simulation architecture** to validate CloudCore/EdgeCore deployments before testing on physical RK3588 hardware.
- Debugged edge-cloud communication and performance issues while evaluating **RK3588 AI inference and NPU workloads** for edge deployment.

Hashnode

Mar 2025 – Present

Technical Writer

- Authored technical blog posts on **Kubernetes, Docker, Go, and AWS**, translating hands-on infrastructure work into practical, reproducible guides.
- Produced hands-on tutorials covering KubeEdge, K3s, and other CNCF technologies for the developer community.

Speaking & Recognition

- **Speaker at KubeCon + CloudNativeCon India 2026** – Presented a [talk](#) [🔗](#), “Validating RK3588 for KubeEdge: Scalable ARM64 Edge Node Simulation Without Hardware”.
- **Speaker at CNCF Thane** – Delivered a session on WebAssembly in Cloud Native Ecosystems: portability, performance, and secure edge computing.
- Volunteered at the **Kubeflow booth** at KubeCon + CloudNativeCon India 2026, engaging with the MLOps community and gaining hands-on exposure to real-world ML workflows.
- Reported a valid **local path traversal vulnerability** in AWS SAM CLI, acknowledged by AWS Security under their bug bounty program.

Projects

ModelForge: End-to-End MLOps Platform with Kubeflow

[github](#) 

- Architected an end-to-end **MLOps platform** on Kubernetes using Kubeflow, automating model training, experimentation, deployment, and inference from a single pipeline.
- Orchestrated hyperparameter tuning and model serving via Kubeflow Pipelines and Katib, standardizing reproducible ML workflows across experiments.
- Containerized all pipeline components with Docker, enabling consistent, portable deployment across dev, staging, and production environments.
- Tools: Kubeflow, Kubernetes, Docker, Python, ML Pipelines

KubeJournal: Kubernetes Cluster Log Collection

[github](#) 

- Engineered a Go-based **log aggregation utility** that retrieves and centralizes node-level logs across Kubernetes clusters, reducing troubleshooting time for distributed workloads.
- Deployed as a **DaemonSet** across every node in the cluster, ensuring complete log coverage without manual per-node configuration.
- Built a lightweight CLI for querying and filtering aggregated logs, eliminating the need to manually run `kubect1 logs` across every node.
- Tools: Go, Kubernetes, DaemonSets, Linux

GitOps CI/CD Pipeline with Jenkins & ArgoCD

[github](#) 

- Architected a **GitOps CI/CD pipeline** integrating Jenkins and ArgoCD, fully automating Kubernetes deployments from commit to production.
- Implemented 4 pipeline stages – SonarQube analysis, Docker image builds, auto-sync, and rollback – to improve deployment reliability.
- Configured Git-triggered webhooks to automatically trigger build, test, and deployment on every push, eliminating manual release steps.
- Tools: Jenkins, ArgoCD, Docker, SonarQube, Kubernetes

Certifications & Training

KubeCon + CloudNativeCon India 2026 Speaker
